

Snow Tires 14" x 5" pneumatic tires provide positive traction, even in icy conditions.

Plug-In Electric Start Using a standard 3-prong extension cord, plug in, push a button, and you're up and running! There is no battery that requires charging or maintenance. Recoil backup, with compression-release, makes for easy pull starts when you're away from a power source.

Friction Disc Transmission Simple but effective drive system transfers power to the drive wheels via a rubberized friction disc. Easy to maintain and access.

2-Stage for Efficient Snow Removal The serrated auger breaks up ice and compacted snow. Our heavy-duty steel impeller (12" in diameter and constructed of 10-gauge steel) is backed by a LIFETIME warranty and draws the loosened material up and out the chute. This 2-stage system creates a high-speed wind channel that throws snow up to 40 feet away!

Snow Stick (included) Onboard snow stick for quick and safe clearing of ice or other clogs.

DR Power 2-Stage Snow Blower

The PRO 24B is our lightest and easiest to maneuver DR Snow Blower. At 24" wide, it makes walkways passable in a single pass. With 6 forward and 2 reverse speeds, the PRO-24 is a terrific value. Ideal for small-to-medium sized jobs.

Product Description

A Great Value with High-End Features

The PRO-24B is our "entry level" DR Snow Blower, but it's loaded with features that you won't find on similarly priced competitors. Start with plug-in electric starting to get you up and running on the coldest morning, then add: heated hand grips, EZ-Turn™ steering for hassle-free 180° turns, an LED headlamp to light your way in the dark, and an integrated control panel that puts all operations within easy reach.

With a 24" clearing width and an 8-speed transmission (6 forward speeds and 2 reverse), the PRO-24B is ideally suited for properties with small-to-medium sized clearing needs. The DR OHV engine has plenty of power (6 HP, 212cc) to get through the heaviest snowfalls, and durable tires that provide reliable traction on icy surfaces.

Product Summary

- 24" wide, 2-stage blower
- 6 HP (212cc) DR OHV engine
- 6 forward speeds, 2 reverse
- EZ-Turn™ steering technology
- 14"x 5" snow tires
- Throwing distance: up to 40'
- Friction disc transmission
- See Features and Specs for more product details

Warranty Coverage

- Machine: 2 year residential; 90 days commercial
- Engine: 2 year residential; 90 days commercial

Features

Plug-in Electric Start Using a standard 3-prong extension cord, plug in, push a button, and you're up and running! There is no battery that requires charging or maintenance. Recoil backup, with compression-release, makes for easy pull starts when you're away from a power source.

DR OHV Engine This cold-weather engine (6HP, 212cc) is designed especially for extreme conditions and has the muscle to power through deep or wet snow.

EZ-Turn™ Steering When you initiate a turn, the two axle shafts are free to drive independently and go wherever you guide the machine. The result is the ability to make tight, 180° turns, without wrestling the machine.

Integrated Control Panel Controls for all functions are right at your fingertips: gear shift, auger and drive hand levers (once transmission is engaged, the auger control locks in so you can operate with right hand only), chute rotation/deflection, heated handwarmers, and LED headlight.
